

ZINCUM METALLICUM [ZINC.]

GENERAL

Zincum metallicum [Zinc.]

Zinc. - - The Element.

Persons suffering from cerebral and nervous exhaustion; **defective vitality**; brain or nerve power wanting; too weak to develop exanthemata or menstrual function, to expectorate, to urinate; to comprehend, to memorize.

Incessant and violent fidgety feeling in feet or lower extremities; must move them constantly.

Always feels better every way as soon as the menses begin to flow; it relieves to all her sufferings; but they return again soon after the flow ceases.

In the cerebral affections: in impending paralysis of brain; where the vis medicatrix nature is too weak to develop exanthemata (Cup., Sulph., Tub.): symptoms of effusion into ventricles.

Child repeats everything said to it.

Child cries out during sleep; whole body jerks during sleep; wakes frightened, starts, rolls the head from side to side; face alternately pale and red.

Convulsions: during dentition, **with pale face, no heat**, except perhaps in occiput, no increase in temperature (rev. of Bell.); rolling the eyes; gnashing the teeth.

Automatic of motion of hands and head, or one hand and head (Apoc., Bry., Hell.).

Zinc child

Suppression (at EMOTIONAL / MENTAL LEVEL)

FAG - Depression of Nerves (lack of reaction)

Trembling , Restlessness , Convulsions

Destruction of RBC (blood cells) - Testes MM (TESTE GROUPS)

Early pathological complications (Neurological in childhood)

They feel that they have to be *very intellectual and it makes them feel pressurised, particularly with regards* to studies. They can become very anxious before exams, very afraid that they won't pass (similar to SILICA , CARC - but Nerves are affected)

GENIUS of ZINC MET

Suppression , Slowness , restlessness , Nerves , Fag ,
Anxiety

ZINCUM METALLICUM [ZINC.]

GENERAL

Zincum metallicum [Zinc.]

Zinc. - - The Element.

Persons suffering from cerebral and nervous exhaustion; **defective vitality**; brain or nerve power wanting; too weak to develop exanthemata or menstrual function, to expectorate, to urinate; to comprehend, to memorize.

Incessant and violent fidgety feeling in feet or lower extremities; must move them constantly.

Always feels better every way as soon as the menses begin to flow; it relieves to all her sufferings; but they return again soon after the flow ceases.

In the cerebral affections: in impending paralysis of brain; where the vis medicatrix nature is too weak to develop exanthemata (Cup., Sulph., Tub.): symptoms of effusion into ventricles.

Child repeats everything said to it.

Child cries out during sleep; whole body jerks during sleep; wakes frightened, starts, rolls the head from side to side; face alternately pale and red.

Convulsions: during dentition, **with pale face, no heat**, except perhaps in occiput, no increase in temperature (rev. of Bell.); rolling the eyes; gnashing the teeth.

Automatic of motion of hands and head, or one hand and head (Apoc., Bry., Hell.).

Chorea: from suppressed eruption; from fright.

Pressure to achieve at intellectual faculties, with Emotions being suppressed

Repeating knowledge: intelligent

Intellectual performance is very important to them. They feel driven to do very well at school. This pressure to achieve may initially lead to outstanding performances, but it can also lead to the opposite: a mental dullness. Their constant urge to acquire more knowledge can give rise to feelings of not having done enough. Then they get blocked and can't think anymore, feeling they are the 'thickest' of the class.

This situation is often brought about by an upbringing where the emphasis is on intellectual achievements. They have to get high marks at school, otherwise they won't count. Usually it is the father who exerts the most pressure, and it is typical how it is often the father who brings his Zincum child to see the homoeopath. The rational side may start to block out their feelings, making them appear flat, emotionless, even cold.

Overdoing your work: restless

They like to do their work well, but they tend to overdo it. They are extremely restless, simply can't stop and when they have nothing to do their body just carries on regardless. When they go to sleep their legs are still on the move, when they are talking their mouth makes all sort of extra movements. They have many tics, restless hands and feet. They have been brought up with the idea that 'it is no good sitting still', 'go and find something useful to do' etc. Their complaints are usually worse at times when they are forced to take a break, like weekends, holidays, but also at the end of a working day and in the evening at bedtime.

Overdoing their workthere body remains at the state of restless anxiety --- this restlessness - later on develops Neurological AFFECTIONS which are agg when they take the BREAK

Zinc child

The reaction time is slow, slow of grasping what is said, slow in answering, and they are much more docile, less unstable

The Zinc. Child will come for treatment at about the same age, possibly a little older, and will present a history of delayed development. Delayed puberty very often gives the indication for the Zinc. child.

DULLNESS - in children with TYPICAL pains in OCCIPUT

DULLNESS. (699) - BoeCv

DULLNESS: DAYTIME. (24) - KnCB

• **DULLNESS: DAYTIME: HEADACHE, WITH OCCIPITAL, CHRONIC.** (1) - KnCB

Dullness: morning. (118) - HaSa

Dullness: morning: rising, on and after. (14) - HaSa

Dullness: noon. (5) - AllTF

Dullness: afternoon: agg. (52) - HaSa

Dullness: evening: agg. (55) - JaGHG

DULLNESS: ALCOHOL, ALCOHOLIC DRINKS, FROM. (32) - FIlE

Dullness: children, in. (29) - KeJT

• Dullness: closing eyes: agg. (1) - KeJT

Dullness: coryza: during. (30) - MaDo

Dullness: dinner: after. (4) - AllTF

Dullness: Eating: After. (25) - NoAI

DULLNESS: HEADACHE: WITH. (105) - HaSa

MENTAL FAG

PROSTRATION OF MIND. (559) - JaGHG

Prostration of mind: alcohol, alcoholic drinks agg. (14) - CIJH

• **PROSTRATION OF MIND: ANEMIA, IN.** (1) - LiADv

Prostration of mind: anger, vexation, after. (2) - LiCon

Prostration of mind: dreaming, after. (23) - JaGHG

PROSTRATION OF MIND: MENTAL EXERTION AGG. (68) - ViGe

PROSTRATION OF MIND: MENTAL EXERTION AGG.: STUDY, PROLONGED. (5) - ViGe

PROSTRATION OF MIND: NURSING CHILD, AFTER. (2) - KnCB

Prostration of mind: old people, in. (11) - RoHA

Prostration of mind: sleep, from loss of. (24) - CIJH

Prostration of mind: study, night watching, loss of sleep, from. (8) - CIJH

Prostration of mind: wine, after. (2) - CIJH

Prostration of mind: work, from. (31) - StKa

KENTS writing - SLOWNESS (reminds one of CALC-C)

All the functions are slow; eruptions appear slowly. The whole economy seems to be tired and feeble, so that when a girl approaches puberty and it is time for the menses to be established, but the flow does not appear, she goes into a decline; she begins to manifest symptoms, jerking, and twitching, soreness in the back of the neck, burning of the whole spine, creeping and crawling of the extremities, hysterical manifestations of all sorts. Sensitive to every little noise, to people talking in the room, to crumpling of paper. "Talking or listening is distressing; much talking of other people, even of those of whom he is fond, affects his nerves and makes him morose."

Feeble children, feeble girls, mind feeble, memory poor. Tendency to be docile, but when aroused irascible. If the child comes down with scarlatina or measles, it goes into a stupor. The eruption does not come out. There is a tendency to convulsions, drawing in the extremities, suppression of urine, rolling of the head from one side to the other, and from stupor it goes into complete unconsciousness; inability to throw eruptions to the surface.

ZINC MENTAL SLOWness - due to suppression but ACTIVITY like eating FAST

HURRY, HASTE: EATING, WHILE. (47) - BoeCv

• **HURRY, HASTE: EATING, WHILE: EAT FAST ENOUGH, CANNOT. (1) - LiADv**

Hurry, haste: heat, during. (8) - BoCM

Restlessness, nervousness: cough, with. (18) - MaDo

• Restlessness, Nervousness: Eruptions: Suppressed, Agg. (1) - BuWM

Restlessness, nervousness: fever: during. (62) - Pharm

Restlessness, nervousness: heat: during. (119) - BoerO

Restlessness, nervousness: menses: suppressed, during. (12) - KeJT

Restlessness, nervousness: motion: amel. (15) - ViGe

Restlessness, nervousness: **motion: amel.: feet. (2) - ViGe**

RESTLESSNESS, NERVOUSNESS: MOVE: MUST, DRIVES ONE FROM PLACE TO PLACE. (203) - LiCon

Restlessness, nervousness: palpitation, during. (38) - BoerO

Torments: those around him. (8) - KeJT

TORMENTS: THOSE AROUND HIM: EVERYONE WITH HIS COMPLAINTS. (4) - KeJT

Malicious, vindictive. (167) - JaGHG

Malicious, vindictive: anger, during. (16) - JaGHG

Malicious, vindictive: play dirty tricks on others or their teachers, schoolboys. (2) - GaJP

REPEATS SAME THINGS. (24) - KnCB

• REPEATS SAME THINGS: TALKING OF OTHERS, IN A MONOTONOUS, SINGING WAY, WITHOUT BEING CONSCIOUS OF IT. (1) - KnCB

Reflecting: long. (22) - KeJT

zinc children can become very anxious and over
hypochondriacal where slightest thing - can affect and
they can imagine they have illness

HYPOCHONDRIASIS: GASTRIC SYMPTOMS. 0>1>0

IDEAS: GRASP, CANNOT. 0>1>0

can be worried
about Future -
what will happen
at home, family,
Future

ANXIETY: CHEST, IN. (216) - KeJT

• **ANXIETY: CHEST, IN: EVENING: AMEL.** (1) - KeJT

ANXIETY: CONSCIENCE, OF. (210) - JaGHG

Anxiety: family, about his. (71) - GaJP

ANXIETY: HEALTH, ABOUT. (302) - BoeCv

Anxiety: health, about: daytime. (3) - LiSa

Anxiety: Health, About: Afternoon. (3) - NoAI

Anxiety: health, about: abdominal complaints, with. (19) - JaGHG

Anxiety: health, about: eating, after. (6) - BoeCv

ANXIETY: HEALTH, ABOUT: MASTURBATION, FROM. (5) - FaEA

ANXIETY: HEALTH, ABOUT: SEXUAL. (14) - FaEA

ANXIETY: HEALTH, ABOUT: SEXUAL: EXCESSES, AFTER. (12) - FaEA

Anxiety: health, about: weakness, weariness, with. (8) - JaGHG

Anxiety: health, about: work, with aversion to. (11) - JaGHG

Anxiety: health, about: morose. (14) - JaGHG

Anxiety: oppressive. (89) - LiCon

Anxiety: others, for. (102) - GaJP

ANXIETY: PURSUED, AS IF. (15) - KnCB

SUPERSTITIOUS: BELIEFS TROUBLE HIM. 0>1>0

can be one of the most superstitious children

ANGER - which can get VIOLENT at times

- Anger: Delusions, With. (1) - KnCB

Anger: fright, fear agg. (18) - HeCo

Anger: impatience, with. (16) - CIJH

Anger: menses: during. (10) - NoAI

ANGER: TALKING OF OTHERS, FROM. (7) - DaFS

ANGER: TREMBLING, WITH. (36) - KeJT

Anger: trifles, about. (154) - JaGHG

Anger: voices of people, to, talking of others. (4) - KeJT

Anger: causeless. (21) - AllTF

ANGER: EASILY. (123) - AllTF

- Anger: easily: affects him much, which. (1) - KnCB

Anger: oneself, with. (38) - DaFS

Anger: stabbed anyone, so that he could have. (12) - JaGHG

Anger: sudden, paroxysmal. (47) - CIJH

Anger: Violent. (185) - JaGHG

DREAMS of ZINC

Dreams: money. (66) - BoeCv

Dreams: murder. (142) - JaGHG

Dreams: murder: murdered, of being. (50) - JaGHG

Dreams: persistent. (30) - BoeCv

Dreams: Pleasant. (180) - KeJT

DREAMS: PURSUED, OF BEING. (149) - KeJT

Dreams: quarrels, strife. (140) - JaGHG

Dreams: remembered. (61) - NoAI

Dreams: restless. (74) - BoeCv

Dreams: reveling. (12) - WiEH

DREAMS: ROBBERS. (101) - NoAI

DREAMS: ROBBERS: ANXIOUS, WAKES FREQUENTLY, WITH VIOLENT PALPITATION AND SCREAMING. (2) - KnCB

Dreams: Sad. (72) - NoAI

Dreams: stool. (21) - KeJT

Dreams: Strangled, Of Being. (7) - JaGHG

- Dreams: strangled, of being: morning, fear lest the man who strangled her would return. (1) - KnCB

Dreams: true, seem, on waking. (74) - BoeCv

Dreams: unpleasant. (137) - CIJH

Dreams: urinating, of. (40) - NoAI

Dreams: Urinating, Of: Soiled By Urine. (2) - NoAI

Unusually cheerful in the morning, but morose or sad at night (hoyne clinical therapeutics)

Screaming in the SLEEP

Screaming: sleep: children, during sleep. 3>3>2

SLEEP POSITION

Position: face, on. (17) – HaSa

POSITION: HEAD: BORED INTO PILLOW. (24) – I

Position: head: bored into pillow: face. (14) – HaSa

• POSITION: HEAD: BORED INTO PILLOW: OCCIPUT. (1) – StKa

Position: head: low. (12) – KeJT

Position: knees: on. (40) – HaSa

Position: knees: on: elbows, and, knee-chest. (34) – KuJo

Position: knees: on: face forced into pillow, with. (14) – HaSa

Position: moves feet constantly. (2) – BoerO

POSITION: STRANGE. (11) – PhSR

Extreme MENTAL FAG

SLEEPINESS: SLEEPLESSNESS, WITH: WORK, AFTER. (2) - KnCB

Sleepiness: weakness, with. (113) - JaGHH

Sleepiness: work: during. (28) - BoeCv

Sleepiness: yawning, with. (121) - BoeCv

Sleepiness: constant. (39) - JaGHH

SLEEPINESS: OVERPOWERING. (197) - JaGHH

Sleepiness: overpowering: work, during. (12) - JaGHH

Fumbles the genitals while coughing esp. children.

Violent urging, but urinates only in odd positions; bending backwards, crossing limbs etc. Hysterical retention

Aversion to meat esp. veal; sweets; cooked or warm food.

ALLERGIC ear infections - Frequent acute stitches; in children (boys).
Otorrhoea of foetid pus. Itching better boring into it.

ALLERGIC EYE symptoms - Conjunctivitis worse inner canthi.
Lachrymation on eating. Pterygium.

Convulsions

Clinical observations in childrens cases

Behaviour patterns *in children*

01

First 10 minutes in the clinic

- If it is a child or a toddler

02

Reaction to stimuli

- Light, noisem people, new people
- Food, sleep, postures

03

Reaction to people

- Family, siblings, care akers
- Relations of mother

04

Speed or pace of child

- In different situations
- Dull, fast, hurried

05

Facial expressions

- Gestures, antics

06

**Overall development -
according to age**

• Physical / emotional / intellectual

07

Fears

- Light, noisem people, new people
- Food, sleep, postures

08

Activities he likes to do

- Games, sports, studies, creative inclinations, mischieves

09

Qualities that makes the child different to other children

10

What makes the child laugh or cry. What is his view about everything/ or no view/ specific things he likes - toys, games, TV, movies, people

**First 10 min and
observations in clinic**

What is Cerebral Palsy?

Cerebral palsy (CP) is a group of disorders that affect a **person's ability to move and maintain balance and posture**. CP is the most common motor disability in childhood. *Cerebral* means having to do with the brain. *Palsy* means weakness or problems with using the muscles. CP is caused by **abnormal brain development or damage to the developing brain** that affects a person's ability to control his or her muscles.

The symptoms of CP vary from person to person. A person with severe CP might need to use special equipment to be able to walk, or might not be able to walk at all and might need lifelong care. A person with mild CP, on the other hand, might walk a little awkwardly, but might not need any special help. CP does not get worse over time, though the exact symptoms can change over a person's lifetime.

All people with CP have problems with movement and posture. Many also have related conditions such as [intellectual disability](#); seizures; problems with [vision](#), [hearing](#), or speech; changes in the spine (such as scoliosis); or joint problems (such as contractures).

Cerebral palsy

DYSKINETIC

ATAXIC

MIXED

SPASTIC

DYSKINETIC

Hemiplegia

Diplegia

Quadriplegia

Athetoid

Types of Cerebral Palsy

Doctors classify CP according to the main type of movement disorder involved. Depending on which areas of the brain are affected, one or more of the following movement disorders can occur:

- Stiff muscles (spasticity)
- Uncontrollable movements (dyskinesia)
- Poor balance and coordination (ataxia)

Key developmental milestones

Hold head upright
3-4 months

Sitting
6-9 months

Standing
10-12 months

Walking
11-15 months

Milestone	✓	✓	✓	✓
AADC deficiency	✗	✗	✗	✗
Cerebral palsy	✗	✗	✗	✗

Developmental milestones achieved in children with AADC deficiency and/or cerebral palsy varies from child to child

Movement and development problems

The main symptoms of cerebral palsy are problems with movement, co-ordination and development.

Possible signs in a child include:

- delays in reaching development milestones – for example, not sitting by 8 months or not walking by 18 months
- seeming too stiff or too floppy (hypotonia)
- weak arms or legs
- fidgety, jerky or clumsy movements
- random, uncontrolled movements
- muscle spasms
- shaking hands (tremors)
- walking on tiptoes

Some early signs of Cerebral Palsy include:

Increased or decreased muscle tone

Arching of the back

Poor head control

Inability to sit up by 8 months

Seizures / epilepsy

Random or uncontrolled body movements

Balance and coordination problems

Eating / swallowing

Learning difficulties

Behavioral problems

Visual / hearing problems

Sleeping problems

Cuprum met

Cu

Metal

CUPRUM CHILD

CRAMP and SPASMS is the genius of Cuprum Met

Special action - **NERVES , SPINE NERVES , RESPIRATORY SPHERE**

Sub-oxidation, affecting the centers of the medulla

Violent effects, in recurring symptom groups.

CRAMPS AND SPASMS, or all kinds, radiating from or of single parts, **extort cries**, tonic **knotting the muscles**, twisting the head awry, with **trismus** or hiccough, then deathly exhaustion, chills, spasmodic laughter, etc., in chest, behind sternum, of fingers, **calves** amelioration stretching leg out, or soles, etc., **nocturnal**, aggravation, at menses, epileptic.

Jerkings, during sleep.

Pains, **pressive, aggravation touch**, as from blows, being broken, etc., in racking darts, through whole body.

Continued weakness.

Poor reaction.

Easy relapses.

Latency.

Blueness.

Fixed, routinistic children - can't tolerate any change (like carbon children)

Cannot bear anyone to come close/approach - will scream, shout, kick, bite, tear
+ can have piercing shrieks (like LYSSIN child)

- Many children who we routinely give Tarent - end up being CUPRUM children originally
 - Malicious children, Joy at misfortune of others +
 - Aggressive, destructive children as well
 - Imitation, mimics everyone, can be tricky (doesn't react to music, rhythm)
-
- Cuprum child can be dictatorial commanding, obstinate (reminds one of Ferrum child)

Sullen; tricky; alternating yielding and head-strong. Malicious. Mania; bites, beats, tears the things. Imitates; mimics.

Theme of ATTACK and defence - state of constant state of DOMINATION ,
ATTACK , PRESSURISED - going in. state of CRAMPED

- Most of the symptomatology of Cuprum can be highlighted by the great tendency toward convulsion. Cuprum has cramps and spasms which occur in virtually every system: the respiratory system (asthma), the gastrointestinal system (colic and spasmodic vomiting), the musculoskeletal system (leg cramps), but most importantly in the nervous system. Cuprum is the foremost specific remedy for seizure disorders and epilepsy. Vithoukias described the Cuprum patient as having intense emotions or impulses which are strongly suppressed. To maintain control over strong inner emotions, the patient rigidly closes down every expression. This makes the patient appear absolutely closed. The convulsion and spasms occur from the release of this rigid tension. Eventually, the patient closes so much that he becomes dull and slow, even to the point of senility.

Cramps

Recurring or periodic bouts of cramps, often with jerking or cramps of the calves, buttocks or fingers.

Constant rumbling in abdomen during sleep

Cuprum Drug picture

- Essence: maintaining control: cramp.

Holding on to your work: serious

These are serious people who work hard. They want to get on with their work, to carry on and expand. They are not allowed to ease up, whatever has been built up should be maintained. They are serious, hard working, responsible, sometimes even extremely ambitious or fanatical.

Maintaining control: cramp

They don't want to lose control and this tendency to hold on can cause cramps, either on the emotional or on the physical level. They have to be kind and keep their emotions under control, but it is rather a forced sort of smile. They won't let go of their own ideas and thoughts, which are often very conservative. They are rigid and precise. The physical signs of this rigidity are usually symptoms of cramp, often cramp in the calves, as if they are always having to stand on tip toes. But they can also be cramps anywhere else in the body; in the thighs, back, stomach, heart etc.

Maintaining control: cramp

They don't want to lose control and this tendency to hold on can cause cramps, either on the emotional or on the physical level. They have to be kind and keep their emotions under control, but it is rather a forced sort of smile. They won't let go of their own ideas and thoughts, which are often very conservative. They are rigid and precise. The physical signs of this rigidity are usually symptoms of cramp, often cramp in the calves, as if they are always having to stand on tip toes. But they can also be cramps anywhere else in the body; in the thighs, back, stomach, heart etc.

Maintaining order: telling tales

Rules are there to be obeyed. As long as they follow the rules nothing can go wrong. Or if something does go wrong they won't be blamed, because they have always obeyed the rules. They love rules, it gives them a sense of security. And it is very important to them that nobody steps out of line. If someone doesn't follow the rules they will report them. These are the children who tell tales.

Detaining people who make mistakes: guard

Their desire to control can be quite obsessive. Everything has to be checked, everything has to be perfect. They consider it their task to maintain order and can get very angry if other people step out of line.

Maintaining order: ritual

Another way of maintaining order is through ritual. **Ritual** is a key word for Cuprum. Their rigid desire to follow the rules can lead to ritualistic behaviour, a seemingly meaningless set of actions that are constantly repeated in the same order. This remedy could be very useful for people who are frequently involved in rituals, people such as priests or judges. There is often also a sort of superstitious element in these rituals, 'touch wood', 'cross your fingers' etc.
